Michelle,

Please see page 67 of the attached. We have not yet populated the docket.

The final rule remains in effect.

EPA is currently reviewing. As described in the 2012 Fall Regulatory Agenda (attached), EPA intends to use the emissions estimating methodologies that are under development from data collected from the National Air Emissions Monitoring Study (NAEMS). Link for more information on NAEMS: <http://www.epa.gov/airquality/agmonitoring/index.html>

Suggestion:

I'd like to know more about the status of the reporting exemption for animal feeding operations. Was the final rule suspended when EPA received the voluntary remand or is it still in effect? What is the status of EPA's review? Is there an active docket the public can review? I've been searching EPA websites and the federal register for about 1.5 hours and can't find any additional information. Thank you for your assistance.
